

Maddalena Collini received her Ph.D. in Physics in 1992 and is currently Full Professor of Applied Physics at the Università degli Studi di Milano-Bicocca. Her current interests involve the application of optical microscopy (super-resolution and nonlinear excitation) and image correlation techniques to the investigation of biological systems, especially metal nanoparticle uptake and transport inside cells and complex environments, diffusion and hemodynamics. Recently MC is involved in the development of smart materials exploiting the photothermal effect of nanoparticles.
