

Magda Blosi, PhD in Industrial Chemistry (University of Bologna, 2009), is researcher at the Institute of Science and Technology for Ceramics (ISTEC). She holds expertise in synthesis and characterization of inorganic NPs for application as catalysts, photocatalysts and multifunctional surface coatings (antibacterial, self-cleaning, hydrophobic). She developed several synthesis methods and she is involved in different kinds of research projects (national, EU and with companies). She has collaborated in six European projects, 2 FP7 and 4 H2020 (still ongoing) addressing the research to develop safer by design approaches on nanomaterials. She is coauthor of 6 international patents on nanomaterials and of 50 international scientific papers.
