

Enrica Fontananova: graduated *with laude* in chemistry; Ph.D. in Chemical Engineering; Research Scientist at the CNR-ITM since 2011. Her main research topics are: design and development of nanostructured polymeric and mixed matrix membranes; membrane functionalization; membrane based operations, also integrated, for gas separation, desalination and wastewater treatments; catalytic and bio-catalytic membranes and membrane reactors; membranes for energy conversion. Research team member of numerous national and international scientific projects focusing on membrane science and engineering. Author of 64 peer-review papers published in international journals; 14 book chapters; 10 contributions in encyclopedias; more than 100 contributions in conference proceedings; one worldwide patent. Editor-in-Chief of the “Comprehensive membrane science and engineering”, second edition (2017), Elsevier B.V. ISBN: 9780444637758
